SECC Work Site Learning Opportunities

Industry partnerships are a critical piece of the student preparation equation! We feel that strong classroom preparation must be applied in real-world settings for the curriculum to be meaningful and truly learned.

WorkAbility and TPP students are seeking real world applications beyond the classroom and through volunteerism and internships they can develop skills and solidify their participation in a productive workforce environment.

Volunteering - A work-based learning activity that exposes students to projects designed to develop workplace skills involving industry standards. It also introduces the students to community partnerships and gives them the opportunity to explore career and personal interests.

Internship/Work Experience - The purpose of the Internship program is to provide the intern the opportunity to gain industry related knowledge and skills in accordance with mutually agreed goals and objectives. For a specific period of time, students will explore and gain a better understanding of the wide variety of career options within the designated industry. Workplace activities may include special projects, small components of an array of jobs or tasks from a single occupation or department.
